

Not Every Open Source Cloud Has A Silver Lining

Law360
03.01.2019

The use of open source with cloud-based deployments has become more complicated. Until recently, the OSS license issues with cloud deployments have been fairly straight forward. It is well known that certain OSS licenses have some significant legal implications (detailed below) but that these implications are triggered when software programs that use OSS are *distributed*. Due to the fact that with most cloud-based deployments the software is not distributed, many developers are lulled into a false sense of security that there are no OSS implications with such deployments. The reality is there are a growing number of OSS licenses that have significant legal implications, even when the OSS is used in a cloud-based deployment. This article will address some of the relevant licenses and their legal implications.
