

## Identifying & Avoiding Insider Threats in Today's Remote Workforce Age

### The Official Cyber Security Summit 2021

Virtual

04.07.2021

#### When:

10:30 a.m.- 11:15 a.m. PT

#### Sheppard Mullin Panelist:

Justine Phillips

#### About:

Insider Threat has become increasingly problematic to businesses as the frequency and cost of these threats have risen over the last several years. In a global study conducted by Ponemon Institute in September of 2019, there was a 31% increase in overall cost of Insider Threat and a 47% increase in the total number of Insider Incidents from 2018.

Today, Insider Threat poses an even greater risk to businesses in the wake of the COVID-19 pandemic. Forrester Research, Inc. reported that in 2020, a quarter of all security breaches were caused by an insider and estimates that in 2021, Insider Threats will account for 33% of security breaches.

This panel will discuss the various factors that contribute to this increase in Insider breaches, how remote work has impacted the malicious & non-malicious Insider Threats facing businesses, and the implications this has on enterprises today. Our lineup of Industry Experts will offer their insight & provide best-practices on how businesses and their IT Security Teams should address these risks and adapt in order to defend against Insider Threats.
